

ACKNOWLEDGEMENTS

The author wishes to express his sincere appreciation to Professor John F. Elliott for his supervision, guidance, and constant encouragement throughout the course of this study.

The author also wishes to thank Professors Warren R. Rohsenow, Borivaje B. Mikic and Kenneth A. Smith for their very helpful discussions on the treatment of the effects of local gas evolution and free and forced convection on the Nusselt number of the slag bath.

Thanks are also due to members of the Chemical Metallurgy for the many useful exchanges of ideas.

The National Science Foundation is gratefully acknowledged for their financial support.
